When it comes to cosmetic dentistry, Dr. Saeid S. Mohtashami believes the difference between good and great is in the minute details. This perfectionism is reflected in how natural his work looks. He has performed hundreds of smile makeovers, some of which have been extreme cases. However, he takes tremendous pride in the trust placed on him by patients who come to him with good smiles, and ask him to make them even better.

Method for Smile Makeover

Dr. Mohtashami begins by taking detailed measurements of the face structure. He designs a smile that will harmonize with their features and gender. Each smile design is as unique as the individual. The patient and Dr. Mohtashami discuss, understand and agree on the smile's ultimate design before it is perma-

nently placed in the mouth. The doctor then makes a mold of the patient's teeth and generates a wax-up (a model of the new smile design) from his measurements.

Next, he creates a temporary smile which is fitted over the patient's teeth. The patient wears the exact replica of the smile that has been designed for him or her for two to four weeks. Dr. Mohtashami explains, "If any changes need to be made or if there is something that they don't like about it, we can make those changes before we finalize their smile. Once the patient loves the result, then it is transformed into the real thing." Dr. Mohtashami uses the highest quality of MAC veneers available. They are chemically bonded to each individual tooth for the permanent Smile Makeover.
