

The Beauty of Dental Implants

Bonnie Huler had an accident as a young child and lost several of her upper front baby teeth. Unfortunately, the accident also prevented her second set from coming in as well. She went without replacements of any kind until she was about 13 when she got her first partial.

"I was thrilled just to have something that looked like teeth," says Bonnie. "Since then I've replaced that partial several times. It seems they last about ten to twelve years before they eventually break or no longer fit. I was at that point again when I found Dr. Mohtashami of All Bright Dental.

"His approach was completely different; it involved an implant secured permanent denture (All-On-Four), for my upper arch, and a single implant with a combination of porcelain crowns and veneers for my lower arch. He explained his treatment plan in great detail, backed it up with beautiful photos of similar cases he had done and said he could give me this gorgeous smile in just a few visits! I was all in.

"As you can see my smile makeover has turned out beautiful. I get compliments nearly every day. I love it. I've been telling all my friends how wonderful this office is. The team is sweet and kind, the office is very comfortable, and Dr. Mohtashami is the best. He's kind, gentle and very talented. I'll never go anywhere else again."

THE BENEFITS OF DENTAL IMPLANTS with Dr. Saeid Mohtashami

SINGLE or MULTIPLE DENTAL IMPLANTS, IMPLANT SECURED PARTIALS and DENTURES

Improved appearance. Dental implants look and feel like your own teeth. And because they are designed to fuse with bone, they become permanent.

Improved speech. With poor-fitting dentures, the teeth can slip within the mouth causing you to mumble or slur your words. Dental implants allow you to speak without the worry that your teeth might slip.

Improved comfort. Because they become part of you, implants eliminate the discomfort of removable dentures.

Easier eating. Sliding dentures can make chewing difficult. Dental implants function like your own teeth, allowing you to eat your favorite foods with confidence and without pain.

Improved self-esteem. Dental implants can give you back your smile and help you feel better about yourself.

Improved oral health. Dental implants don't require reducing other teeth, as a tooth-supported bridge does. Because nearby teeth are not altered to support the implant, more of your own teeth are left intact, improving your long-term oral health. Individual implants also allow easier access between teeth, improving oral hygiene. Implant don't get cavities and never need a root canal.

Durability. Implants are very durable and will last many years. With good care, many implants last a lifetime.

Convenience. Removable dentures are just that; removable. Dental implants eliminate the embarrassing inconvenience of removing your dentures, as well as the need for messy adhesives to keep your dentures in place.
